

資源 For Resources

資源: 保存天然資源 - 我們可透過以下幾方面來保護地球上的天然資源。

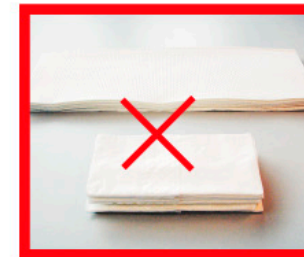

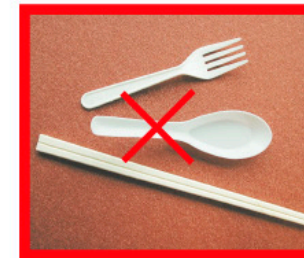

For Resources: We need to conserve our Natural resources. This can be done by the following approaches.

再循環: 回收玻璃、紙、金屬等循環物質，經適當處理後再生使用。

Recycle: We can collect items such as glass, paper and metal for recycling to save our resources.

再用 Reuse

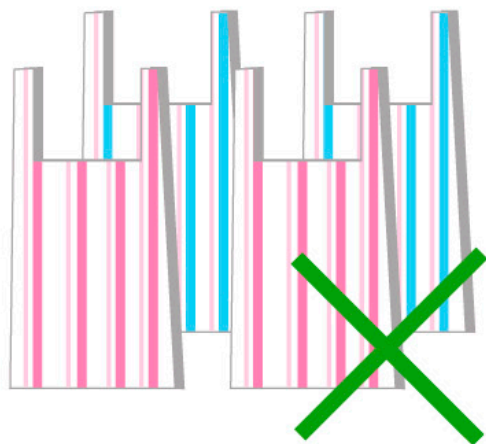

再用: 使用可重複使用的刀、筷子、叉、湯匙，避免使用那些即用即棄的用具；多使用手帕以代替紙巾。

Reuse: We can use stainless steel knife, fork, and spoon instead of plastic ones. We can use handkerchief instead of paper tissue. This can save resources.

減少使用 Reduce

保護地球
Protect the Earth
多使用
環保袋
Use
Environmental Bags

減少使用: 建立節約的良好習慣，例如避免使用過多的包裝紙，多使用環保袋以代替膠袋。

Reduce: We can use less than what we need, such as excessive paper in packaging and environmental bags instead of plastic bags.

可更新 Renewable

可更新: 使用可更新的能源，如太陽能、風力發電、過氧化氫(hydrogen peroxide)以及乙醇(ethanol)等，減少使用汽油。

Renewable: We use renewable energy such as solar power (energy extracted from the sun), wind power (energy extracted from wind), hydrogen peroxide and ethanol as alternative fuel instead of oil.

補充/替代 Replacement

補充/替代: 適當地種植樹木，補回那些被砍伐用來製造紙張和木材等的樹木。

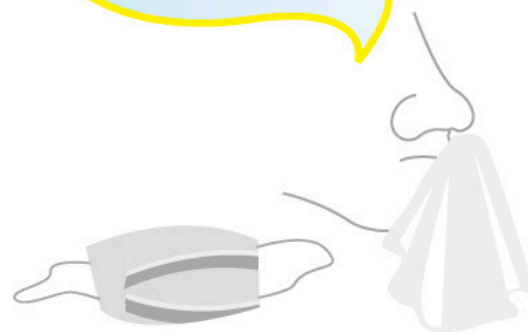

Replacement: We can plant trees in a manageable way to replace the trees being cut down for producing paper, timber etc.

污染 Pollution

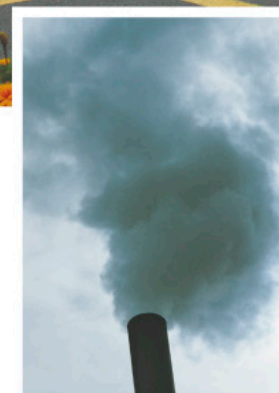

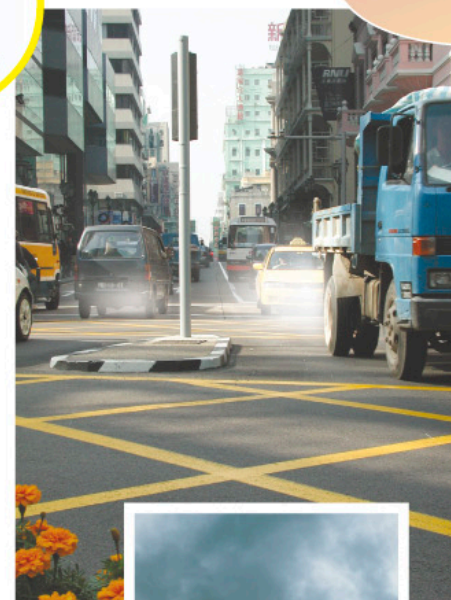

污染: 在環境保護的課題中，污染是首要關注的項目，因為它嚴重破壞我們的天然環境和生態平衡。

Pollution: Pollution is a major concern in environmental protection because it is destroying our natural resources.

空氣: 汽車和工廠釋放的廢氣和化學物質污染了周邊的空氣，容易引起各種呼吸道及其它疾病，所以我們須盡量減少和避免污染物和未經妥善處理的化學物排放於空氣中。

Air: Pollutants from car exhaust fumes and chemicals from industrial plants are polluting our air and cause breathing problems and illnesses. We must reduce or eliminate pollutants and untreated chemicals in the atmosphere.

水 Water

水: 直接將工業或家居廢物排出河流或大海將造成水質污染，從而破壞周遭的環境及危害各種植物的生長。因此，廢物應先經過適當處理，然後排放。

Water: Industrial and household wastes are poured into rivers and the sea and so contaminate the water, damage living conditions and poison living things. We must handle these wastes properly before discharging them.

陸地 Land

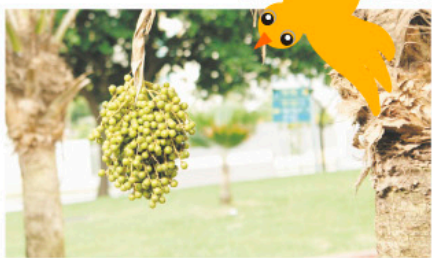

陸地: 隨處拋棄工業或家居廢物會使環境污染及容易引致病菌滋生。

Land: Industrial and household waste dumped on land causes pollution and also creates potential spread of diseases.

保護

Conservation and Protection

綠化環境：在郊野公園、岸邊或其他允許的區域，多種植樹木和植物。我們亦可多種植有果實的樹木為雀鳥提供食物。

Greening our Environment:

We can plant more trees and small plants in country park, shoreline and any other areas under the Government's permission. We should plant trees that bear fruits so that birds and animals can eat them.

保護動物

Animal Protection

保護動物：拒絕購買由瀕臨絕種的動植物所製成的產品，多認識在澳門生長的動物及牠們的生活習慣。我們亦應該學習如何避免破壞環境，以及如何欣賞我們的環境。

Animal protection: We must not buy products made from endangered species at any time. We can learn about the types, the living environment and the eating habits of animals that live in Macau. We must not damage their environment but to learn how to appreciate them.
